

How to install a Flash player into your browser

For SAFARI (Apple):

When you access the JerusalemOnline.com web site, and you do not see the video animations like the following picture

You need to go to:

[Http://macromedia.com/go/getflashplayer](http://macromedia.com/go/getflashplayer)

That will bring you to the site to get the flash player:

Note:

If you are unsure whether your Macintosh is Intel-based or PowerPC-based, click on the Apple menu and select "About this Mac". The Processor field will mention Intel or PowerPC.

Adobe Flash Player 9 Mac OS X (PowerPC) requires the Mac OS X 10.1 or later operating system from Apple, and Microsoft Internet Explorer 5.1 (version 3408) or later, or Netscape 6.2 or later browser versions. If you do not have either version of the browser or operating system, use the Apple Software Update application within OS X. You can also go to the respective companies' websites to update your software.

Installation Instructions

1. Installation of Adobe Flash Player may require administrative access to your PC, which is normally provided by your IT department. For the installation to succeed, you will be asked to close all open browser windows during the installation.
2. Click the download link to begin installation. If a dialog box appears, follow the instructions to save the installer to your desktop.
3. Save the Installer to your desktop, and wait for it to download completely.
4. Read and click through the dialog boxes. You will be prompted to close all open browser windows to continue with the installation.
5. When the Install button appears, click it to install Adobe Flash Player into your browser's plug-ins folder.
6. You can verify the version you have installed by visiting the [About Flash Player](#) page.
